ROTOMOULDED WATER STORAGE TANKS

Rotational Moulding, is a thermoplastic process for producing hollow parts by placing powder or liquid resin into a hollow mould and then rotating that tool bi-axially in an oven at 180° until the resin melts and coats the inside of the mould cavity. The product is then cooled and removed from the mould.

VIRAT

- Made from virgin LLDPE
- UV protection
- Ventilation lid
- Strong & durable
- Threaded lid
- FDA approved
